

Round 2 Regional Haze Planning Workshop State Planning, Regional Analysis, and National Coordination

Priority Source Categories for Round 2 Controls - Western State Caucus meeting

December 7, 2017

This list summarizes sources mentioned for possible Round 2 control analysis. The list is a starting point, not complete.

- EGUs
- Boilers
- Oil & Gas production engines in general
 - especially compression engines (could rank process importance by pollutant emissions rate)
 - heater-treaters (previously evaluated by CO APCD in Round 1)
 - reconcile point vs. non-point tracking / permitting by different air agencies
- Other Oil & Gas issues
 - disturbed soils (fugitive dust)
 - VOC emissions estimates consistently low compared to field studies
- Aluminum smelters
- Pulp mills
- Petroleum refineries
- Cement plants
- Sources on tribal lands

Need base and projection years' pivot table-style emissions database by sector, as was done by WRAP in Round 1.
