

2028 Reasonable Progress Modeling

LADCO's Initial Thoughts

Zac Adelman, Mark Janssen, Donna Kenski
Lake Michigan Air Directors Consortium

December 6, 2017

How Has LADCO Projected Emissions in the Past?

- Controls
 - Start with EPA on-the-books control programs
 - Review key sectors (EGU, non-EGU point, nonpoint) and update control programs with regional information, as needed
- Activity Forecasts (i.e., “growth”)
 - Kept relatively flat at the base year level for most sectors, per EPA’s methods.
 - Exceptions are EGU (ERTAC Point) and onroad mobile (MOVES)

Plans for Phase II Regional Haze

- Plan is to use Inventory Collaborative 2016 base and 2028 future
- Controls
 - Same as before, plus:
 - Review MARAMA's recent modeling
 - Look closely at coal, particularly residential coal use
- Activity Forecasts (i.e., “growth”)
 - Same as before, plus:
 - ERTAC EGU
 - Review MOVES projections and update, if feasible
