WESTAR Exceptional Events Workshop  
February 27-29, 2024

# Topics

Successes and Challenges

Essential Elements and Practices

Transport and Multiple Wildfire Events

Best Practices and Lessons Learned

# Background: Ongoing Wildfire Challenges

- Emissions from wildfires are enormous, can well exceed total mobile and industrial source emissions in the Valley
  - Wildfire emissions easily overwhelm all control measures
  - Leads to excessively high PM and ozone concentrations
- Decades-long fire suppression policies and excessive fuel build-up, widespread drought-driven tree mortality, changing climate conditions (higher temperatures and drier conditions) causing intense wildfire seasons in Western U.S. in recent years

# Top 20 Largest California Wildfires

- 9 of top 20 largest wildfires in California history have occurred during 2020/2021 wildfire seasons
- Evidence of increasingly intense and destructive fire activity

Top 20 Largest California Wildfires

|    | FIRE NAME (CAUSE)                       | DATE           | COUNTY  | ACRES                  | STRUCTURES | DEATHS |
|----|---|----------------|---|------------------------|------------|--------|
| 1  | AUGUST COMPLEX (Lightning)              | August 2020    | Mendocino, Humboldt, Trinity, Tehama, Glenn, Lake, & Colusa   | 1,032,648              | 935        | 1      |
| 2  | DIXIE (Powerlines)                      | July 2021      | Butte, Plumas, Lassen, Shasta & Tehama                        | 963,309                | 1,311      | 1      |
| 3  | MENDOCINO COMPLEX (Human Related)       | July 2018      | Colusa, Lake, Mendocino & Glenn                               | 459,123                | 280        | 1      |
| 4  | SCU LIGHTNING COMPLEX (Lightning)       | August 2020    | Stanislaus, Santa Clara, Alameda, Contra Costa, & San Joaquin | 396,625                | 225        | 0      |
| 5  | CREEK (Undetermined)                    | September 2020 | Fresno & Madera   | 379,895                | 858        | 0      |
| 6  | LNU LIGHTNING COMPLEX (Lightning/Arson) | August 2020    | Napa, Solano, Sonoma, Yolo, Lake, & Colusa                    | 363,220                | 1,491      | 6      |
| 7  | NORTH COMPLEX (Lightning)               | August 2020    | Butte, Plumas & Yuba  | 318,935                | 2,352      | 15     |
| 8  | THOMAS (Powerlines)                     | December 2017  | Ventura & Santa Barbara                                       | 281,893                | 1,060      | 2      |
| 9  | CEDAR (Human Related)                   | October 2003   | San Diego   | 273,246                | 2,820      | 15     |
| 10 | RUSH (Lightning )                       | August 2012    | Lassen  | 271,911 CA / 43,666 NV | 0          | 0      |
| 11 | RIM (Human Related)                     | August 2013    | Tuolumne  | 257,314                | 112        | 0      |
| 12 | ZACA (Human Related)                    | July 2007      | Santa Barbara   | 240,207                | 1          | 0      |
| 13 | CARR (Human Related)                    | July 2018      | Shasta County & Trinity                                       | 229,651                | 1,614      | 8      |
| 14 | MONUMENT (Lightning )                   | July 2021      | Trinity   | 223,124                | 28         | 0      |
| 15 | CALDOR (Human Related)                  | August 2021    | Alpine, Amador, & El Dorado                                   | 221,835                | 1,005      | 1      |
| 16 | MATILIJIA (Undetermined)                | September 1932 | Ventura   | 220,000                | 0          | 0      |
| 17 | RIVER COMPLEX (Lightning)               | July 2021      | Siskiyou & Trinity  | 199,359                | 122        | 0      |
| 18 | WITCH (Powerlines )                     | October 2007   | San Diego   | 197,990                | 1,650      | 2      |
| 19 | KLAMATH THEATER COMPLEX (Lightning)     | June 2008      | Siskiyou  | 192,038                | 0          | 2      |
| 20 | MARBLE CONE (Lightning)                 | July 1977      | Monterey  | 177,866                | 0          | 0      |

There is no doubt that there were fires with significant acreage burned in years prior to 1932, but those records are less reliable, and this list is meant to give an overview of the large fires in more recent times. This list does not include fire jurisdiction. These are the Top 20 regardless of whether they were state, federal, or local responsibility.

\*Numbers not final.

# 2020/2021 Worst CA Wildfire Seasons on Record

Source: CalFire

# San Joaquin Valley - Air Monitoring Network

- Local air pollution control district in central California
- 8 Counties: San Joaquin, Stanislaus, Merced, Madera, Fresno, Kings, Tulare, and Valley air basin portion of Kern counties
- 37 air monitoring stations in the SJV
  - 25 sites with Ozone monitoring
  - 24 sites with PM2.5 monitoring
  - 18 sites with PM10 monitoring

# EE Demonstrations in the San Joaquin Valley

## Successful Attempts Before the 2016 EE Rule Changes

- PM10 from Windblown Dust
- PM10 from Fireworks

## Successes After the 2016 EE Rule Changes

- Wildfires: Attainment of 1997 24-hour PM2.5 ( $65 \mu\text{g}/\text{m}^3$ )

## Attempts and In-Progress Demonstrations

- Wildfires and High-Winds: Maintenance of 24-hour PM10: In-Progress
- Wildfires and Fireworks: 1997 annual PM2.5 ( $15 \mu\text{g}/\text{m}^3$ ): Unsuccessful

# Key Elements of Successful Wildfire Demonstration

- Emissions Occurred
  - Gathering evidence of details of the wildfire and that it occurred on wildlands
- Smoke Transport
  - Satellite imagery, surrounding monitoring sites showed regional impacts, trajectory analysis (HYSPLIT)
- Smoke Impacts at the Air Monitoring Site
  - PM<sub>2.5</sub> chemical speciation, relationships in correlating pollutants e.g. PM<sub>2.5</sub> and CO

# Contributions to Successful Wildfire EE Demo.

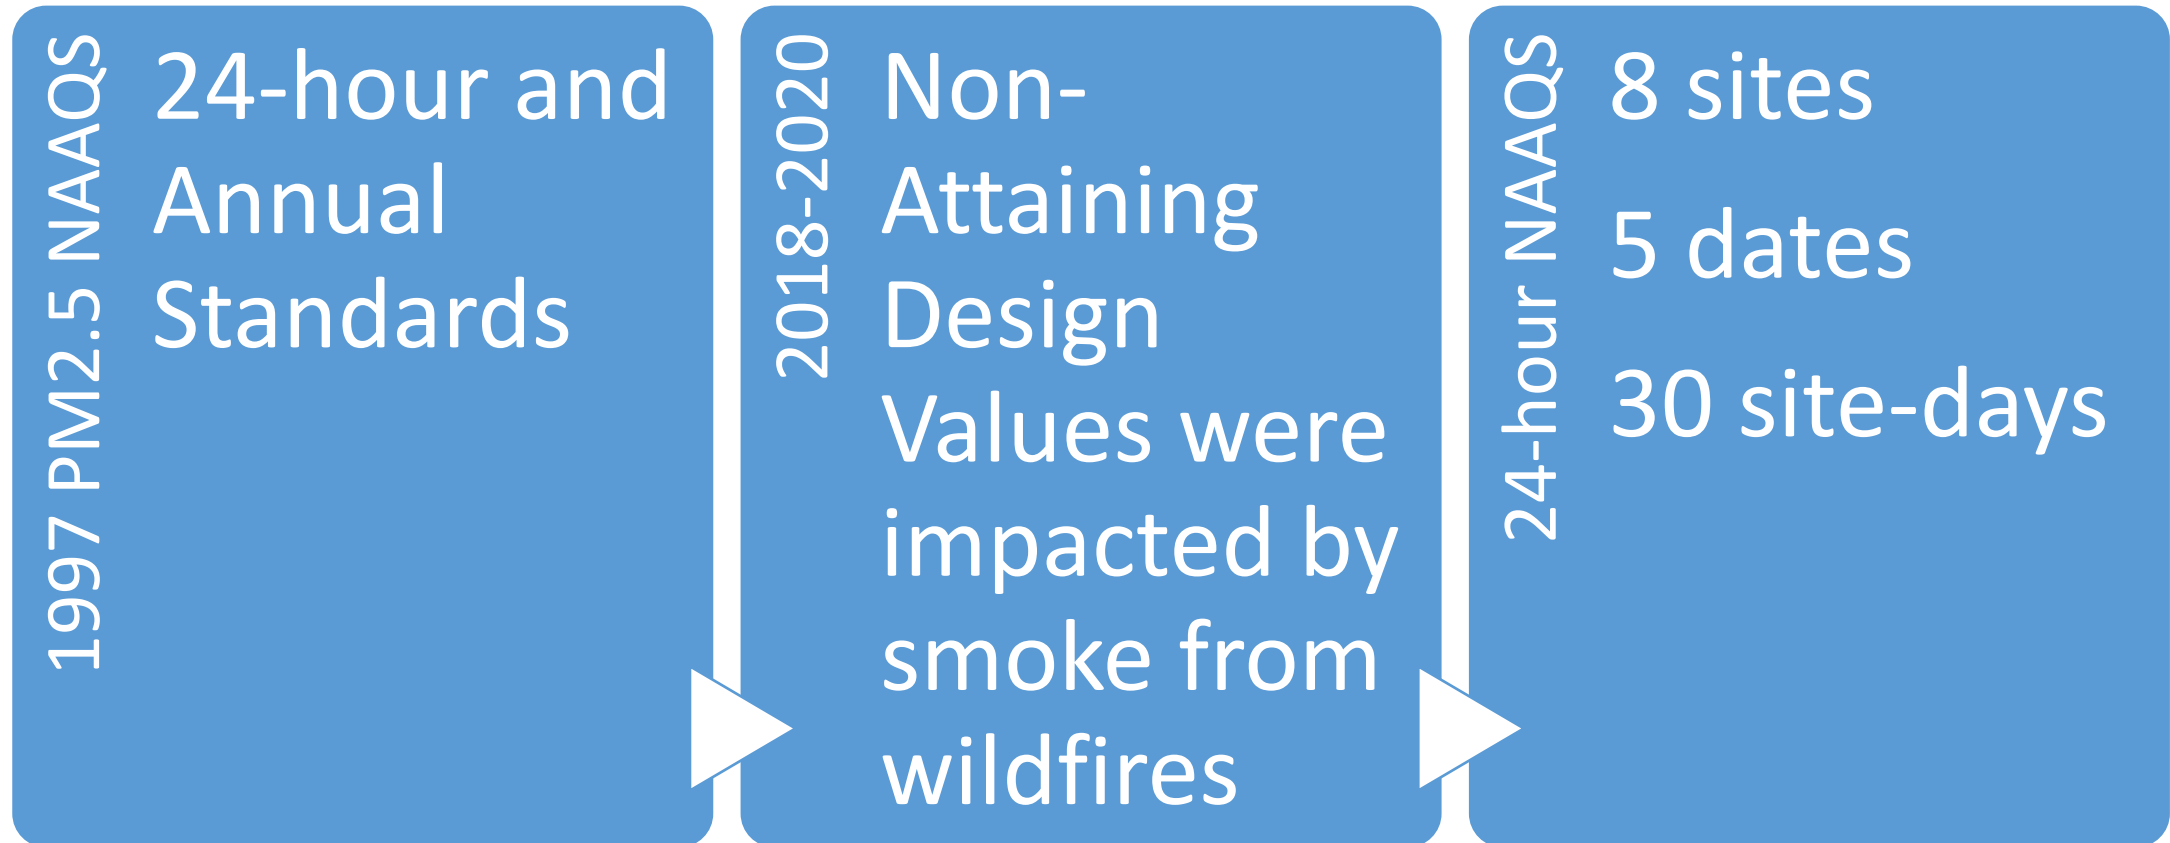

## Data quality and scope of impacts

- PM2.5 data record for the 3-year design value period was high quality and complete
- Relatively few site-day exceedances

## Close coordination with State and EPA

- Regular coordination with experienced and dedicated staff at local, state, and federal agencies

# Recent Success: 1997 24-hour PM2.5 NAAQS

# Recent Success: 1997 24-hour PM2.5 NAAQS

- 30 “site-days”
- Not all exceedances in the 2018-2020 period were significant for the final attainment decision
- PM2.5 concentrations on exceedance days ranged from:
  - 68  $\mu\text{g}/\text{m}^3$  to 159  $\mu\text{g}/\text{m}^3$

**Table 1-2: Exceedances of the 1997 PM2.5 NAAQS at select San Joaquin Valley sites**

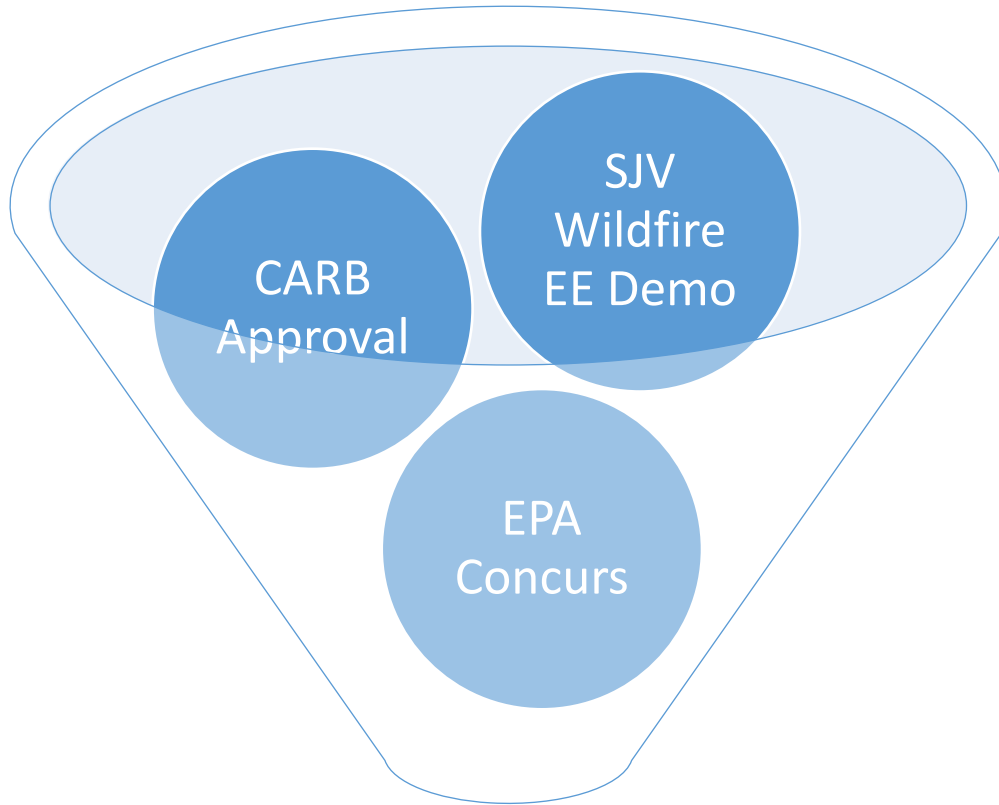

| Site Name                    | PM2.5 Concentration ( $\mu\text{g}/\text{m}^3$ ) |           |           |           |           |
|------------------------------|--|-----------|-----------|-----------|-----------|
|                              | 8/20/2020  | 8/21/2020 | 8/22/2020 | 8/23/2020 | 8/24/2020 |
| Stockton-Hazelton            | 88.8   | 76.3      |           | 65.9*     | 78.2      |
| Manteca                      | 102  | 100.8     |           | 79.3      | 87.6      |
| Modesto-14 <sup>th</sup> St. | 102.2  | 90.1      | 68        | 67.6      | 84.7      |
| Turlock                      | 108  | 96.5      | 97.2      | 67.7*     | 99.1      |
| Fresno-Foundry               | 74.9   | 128.3     | 153.5     | 100.5     | 99.4      |
| Hanford-Irwin                | 77*  | 135.1     | 147       | 116.7     | 107       |
| Corcoran                     | 69*  | 115.2     | 140.1     | 93.2      | 89.8      |
| Bakersfield-Planz            |  |           | 158.6     |           |           |

# Recent Unsuccessful Demonstration: Annual PM2.5 NAAQS

1997 PM2.5 NAAQS

15  $\mu\text{g}/\text{m}^3$   
Annual  
Standard

2019-2021 DV

Non-  
Attaining  
Design Value  
impacted by  
smoke from  
wildfires

2020 & 2021 Events

7 sites  
114 dates  
220 site-days  
Wildfires and  
Fireworks  
Events

# Recent Unsuccessful Demonstration: Annual PM2.5 NAAQS

- Multiple wildfires in 2020 and 2021 caused prolonged smoke impacts in the SJV across all air monitoring sites
  - Continuous weeks/months of heavy wildfire smoke impacts
- 7 air monitoring sites had non-attaining annual PM2.5 design values for 2019-2021 period
- 114 calendar dates where exceedances were significant to the attainment decision

# Recent Unsuccessful Demonstration: Annual PM2.5 NAAQS

- 220 site-days
- Approach to analysis was to organize as three demonstration documents
  - 1 for 2020 wildfires
  - 1 for 2021 wildfires
  - 1 for 2021 fireworks

# Recent Unsuccessful Demonstration: Annual PM2.5 NAAQS

- Each wildfire EE demo included the following, regardless of concentration level:
  - Overview and description of each of the multiple fires
  - Trajectories and satellite imagery for every calendar day
  - Historical site concentrations and evidence of smoke for each site-day
  - PM2.5 speciation analysis, PM2.5/CO ratio analysis
  - Included extra evidence for “difficult” site days (e.g. ceilometer data)
- Over 5,000 pages of documentation and evidence was prepared
  - Represented months of work and thousands of hours of staff time
  - Extensive coordination with CARB and EPA Region 9
  - Difficult for any agency to review this volume of analysis

# Lessons from Unsuccessful Demonstration

- EE analysis for annual standard required documentation of lower concentration days near the  $15 \mu\text{g}/\text{m}^3$  standard
  - Difficult to meet historical comparison tests - will become a more common issue with the  $9 \mu\text{g}/\text{m}^3$  standard
  - No clear guidance at time for “right-sized” analysis for easy vs. difficult EE days
  - Overall, EE process does not work well for annual standard when needing to document long list of days
- Time needed to prepare this size of evidence of EE impacts caused timing issues with meeting statutory deadlines
  - Certification of data happens by May 1
  - Time needed for review by public, state, and EPA regional office
  - EPA timeline for concurrence and final decision could conflict with standard attainment deadlines, could require additional year of data to be considered, etc.

# Looking to the Future

- Exceptional events expected to remain a key factor in initial designations and demonstrating attainment for multiple NAAQS
  - Will be larger national focus for 9  $\mu\text{g}/\text{m}^3$  annual PM<sub>2.5</sub> standard
- New EPA analysis tools including Tiering guidance should help to “right-size” demonstrations
  - Improved preparation/review time for all parties (local, state, federal)
- Early and close coordination with CARB and EPA Region 9 on exceedances impacted by exceptional events a key factor to minimize timing constraints and conflicts

# Thank You!
